

Creating s3 bucket without public ac

Creating s3 bucket with public access

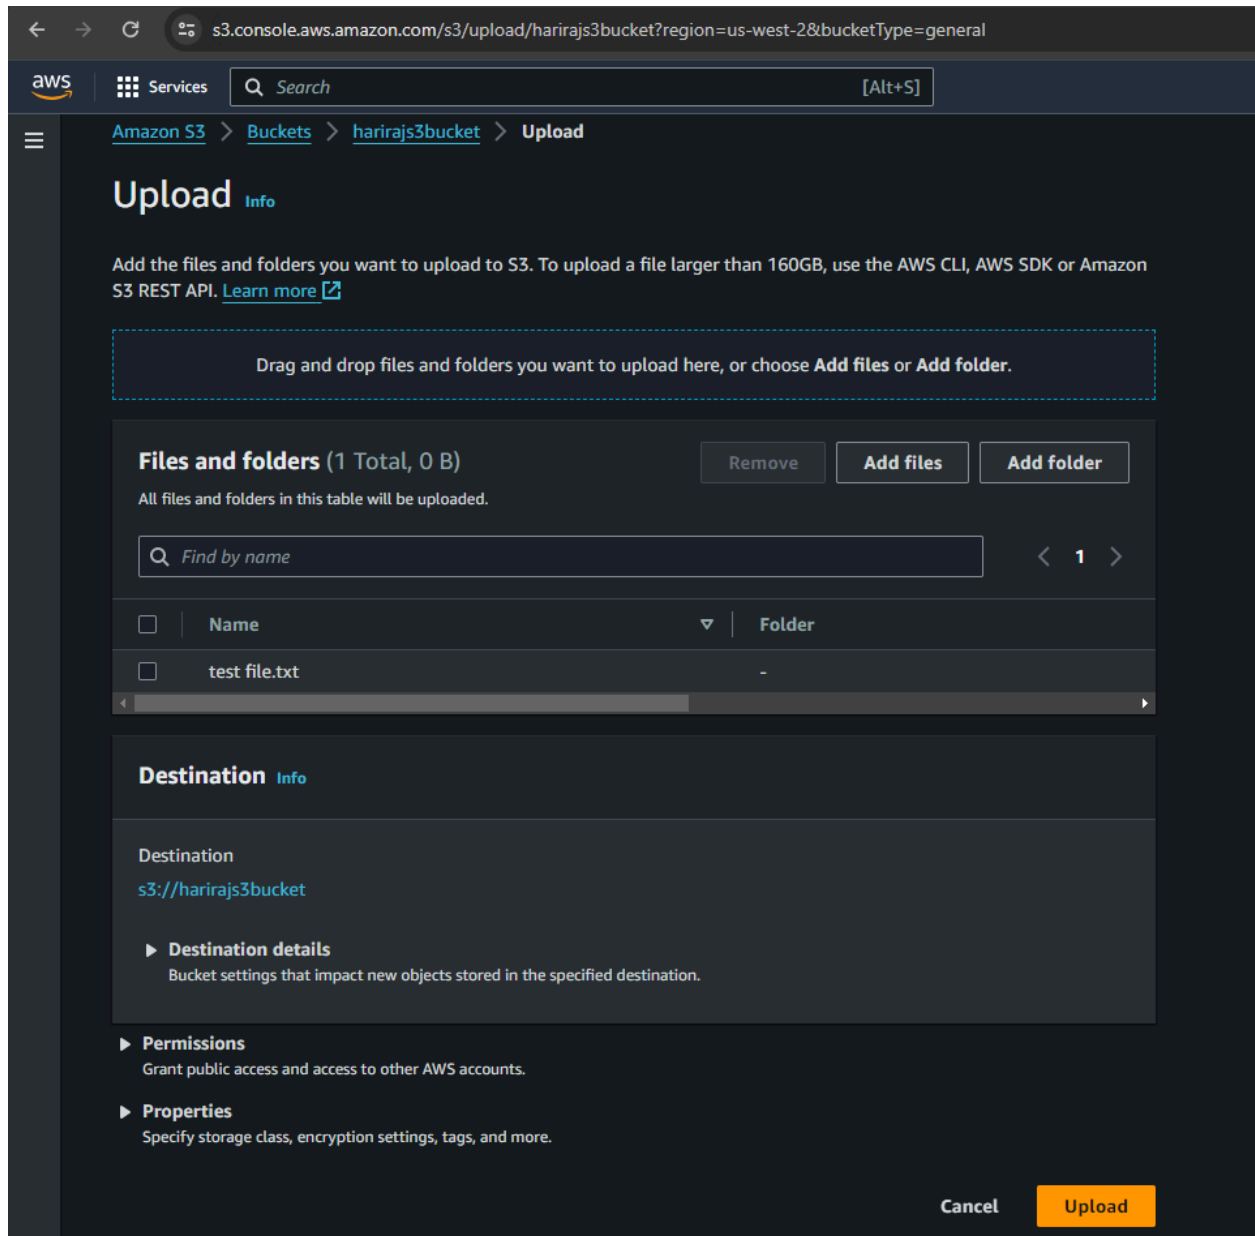

Disabling public access - from s3 bucket permission tab

The screenshot shows the AWS Management Console interface. At the top, there's a navigation bar with the AWS logo, 'Services', a search bar, and a keyboard shortcut '[Alt+S]'. Below this is a breadcrumb trail: 'Amazon S3 > Buckets > harirajs3bucket > Edit Block public access (bucket settings)'. The main heading is 'Edit Block public access (bucket settings)' with an 'Info' link. Below the heading is a section titled 'Block public access (bucket settings)' with a paragraph explaining that public access is granted through ACLs, bucket policies, access point policies, or all, and that turning on 'Block all public access' blocks all of them. Below this is a list of four settings, all of which are checked:

- ☒ **Block all public access**  
Turning this setting on is the same as turning on all four settings below. Each of the following settings are independent of one another.
- ☒ **Block public access to buckets and objects granted through *new* access control lists (ACLs)**  
S3 will block public access permissions applied to newly added buckets or objects, and prevent the creation of new public access ACLs for existing buckets and objects. This setting doesn't change any existing permissions that allow public access to S3 resources using ACLs.
- ☒ **Block public access to buckets and objects granted through *any* access control lists (ACLs)**  
S3 will ignore all ACLs that grant public access to buckets and objects.
- ☒ **Block public access to buckets and objects granted through *new* public bucket or access point policies**  
S3 will block new bucket and access point policies that grant public access to buckets and objects. This setting doesn't change any existing policies that allow public access to S3 resources.
- ☒ **Block public and cross-account access to buckets and objects through *any* public bucket or access point policies**  
S3 will ignore public and cross-account access for buckets or access points with policies that grant public access to buckets and objects.

At the bottom right, there are two buttons: 'Cancel' and 'Save changes'.
